## 1sec ~ 2sec (2)

- Start with several straight lines (Each line is made **one by one** & start from **left to right**).
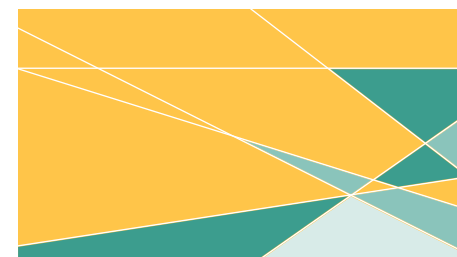

- When the last **clapping sound** comes, each line is filled with **colors** (with different shapes & different opacity).

3sec ~ 4sec (2)

- Again, start with several straight lines, but go from **right to left**.

- SAME, but different color.

4sec ~ 6sec (2)

- The **background changes**, and the straight and dotted lines come out from **left to right** (Every line has its own **shadow**).

- Repeat **twice** in the **same** direction.

- When the last **clapping sound** comes, the **particle** effect or burst effect comes out.

6sec ~ 9sec (2)

- The **background changes** from the **upper** and **lower** sides with different color.

- At the same time, small circles begin to make a circle form (only **two-three** circles come **from below**).
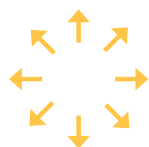

- When the background changes **completely**, the dotted circle will be gone, and the **burst** effect comes out in the **center** (one or more than one).

9sec ~11sec (2)

- The **background changes** again with the **circle pattern** (or other things), that starts in the **middle** of screen.

- When the last **clapping sound** comes, **only the center circle** changes the size rapidly, and the**burst** effect comes out.

11sec ~ 16sec (3)

- **Screen** color **changes** in different colors, and the effect rotates **anticlockwise**.

- After filling in different color, it returns back to the original shape (**opposite direction**, which is clockwise rotation).

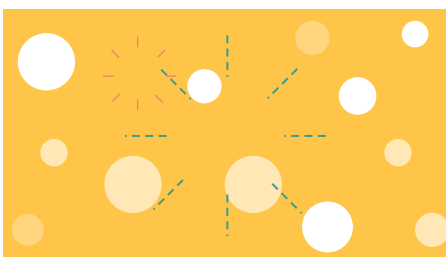

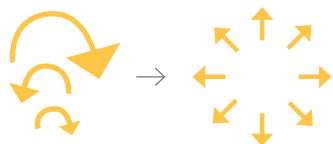

**Q** Here, I want to put the effects on the blue ones, but what do I put in there?

11sec ~ 18sec (3)

- After the blue background disappears, **a new backgroundpattern** emerges.

- The dotted pattern background grows out of the screen (**leaving brust** effect, and **white circles** begin to **glow** simultaneously.

- They repeat the brightness from **0 to 100** (opacity).

- As one of the circles grows, the background turns **white**.

19sec ~ 21sec (2)

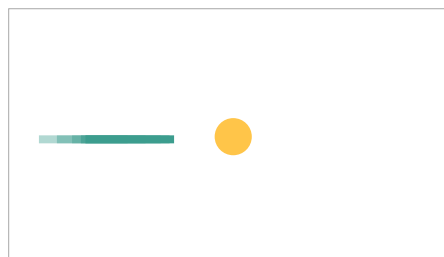

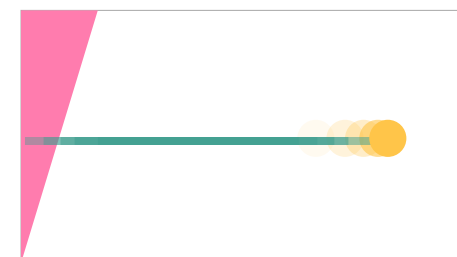

- Two lines **cross** the middle circle.

- The **color of the circle changes** as the two lines pass through the circle (The scale has grown momentarily).

**Q** Or different things / or add more effects

21sec ~ 22sec (2)

- Again, **another line** pass through the circle from **left to right**.

- At the same time, the **background changes** (specific transition effect).
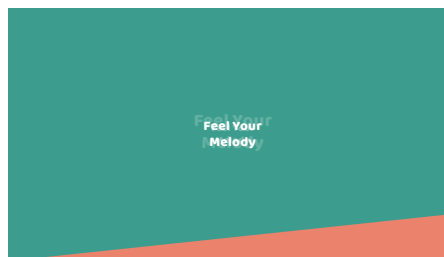

## 22sec ~ 25sec (3)

- Background color transition.

- In this way:)

25sec ~ 27sec (2)

Feel Your Melody

Feel Your Melody

- In the last background, the **title appears** in the middle of the screen (The scale has grown momentarily).

- When the **burst** effect comes out, the whole background changes, and other **small effects** appear. + I'll **add effects** or **text** more if there's time left :)

Color Sequence
